SEALER

Polyurethane sealer coating gives a full "wet" look to the floor. Any concrete can be coated with Polyurethane sealer. It enhances concrete and can be more scratch resistance than other sealers making it popular in both domestic and retail environments.

PROCEDURE

• Grind with 30 grit to desired exposure
• Grind with 60 grit to remove scratches
• Grind with 120 grit to further remove scratches
• Thorough clean
• Application of at least 2 coats of Polyurethane sealer
• Some concrete when ground requires grouting to fill holes and imperfections. This will result in an overall better look, but it is up to the client's discretion.

MAINTENANCE

May require recoating in 6 - 7 years depending on whether it is in a high traffic area.

Refer to the Maintenance Sheet for everyday care.
